Pilot Plant Plan a way for you to get
Lean Expertise in your Plant
at a fraction of the regular cost!

Pilot Plant Plan, a Great Opportunity and a Win-Win Situation!

- **In this competitive global environment we are living today, being competitive is a key element in our success. Lean Manufacturing is the answer to this need. Are you ready?**
- **TPM, SMED, JIT and several other of the Toyota Production System tools are being assimilated by different industries at a very fast pace. This is why American automobile companies had to create an occidental version called Lean Manufacturing.**

The Investment!

- The cost of bringing a group of experts to implement it in our plant can be overwhelming.
- This could be a disadvantage for companies that have large size competitors. On the other hand, ignoring the need for updating our systems and processes to the new trend can be devastating.

The Investment!

- How can we Get it at Low Cost?
- We know about the benefits and savings we can achieve through this process.
- Not always though, we have the special allocation of funds for that purpose.

The Investment!

- Education and training as priorities have taken a back seat in most organizations, but today we are aware of their vital importance. How can we get started in this mandatory process without having to compromise a large part of our budget?
- We have developed a unique idea to make that investment almost imperceptible.

Pilot Plant Plan

- **We are choosing a few companies to offer our PPP.... It is a brief joint venture where we both enjoy benefits.**
- **We are practically paid with food!**

What is in it for the Pilot Plant? Let us see:

- We perform a brief study with your company's team to define the most convenient project to get started.
- According to our experience in the last few years, TPM is the right “first step” to take in the journey to Lean Manufacturing.

What is in it for the Pilot Plant? Let us see:

- **Education and Training:** You will choose six of your best employees to take the training at “partnership” cost, \$ 2,990.00 instead of the \$ 9,990.00 normal fee.
- **We recommend to include in this group at least two Maintenance Technicians, two Operators, (some related to the pilot machine), and your TPM coordinator, this can be a current production or maintenance supervisor.**

What is in it for the Pilot Plant? Let us see:

- This training is done through a Kaizen workshop, the method that has proven to be the best way for adults to learn new disciplines.
- We will provide highly qualified instructors in these projects, you will also have a number of people from other plants (obviously non competitors), that will contribute their creativity, objectivity and ingenuity in an effort to improve your operation.

The Pay!

- Your company will provide the adequate space (training room) and a projector to perform the workshop. Amenities like sodas and cookies are welcome.

The Pay!

- You will also provide the materials and tools needed to do the cleaning, lubrication, adjustments and repairs to the pilot equipment. The equipment itself will be off line for some hours. This is always negotiable.

The Pay!

- **The Pilot Plant will feed us (up to 12 external people plus your own crew) for four days. Just a very simple lunch within the facility the first three days (Tuesday thru Thursday), and a special celebration lunch for Friday, not too fancy, of course.**

The benefits for the future of your plant:

- After this project, the personnel who participated are motivated to replicate the process again and again, so the good results keep growing all the time.
- You can add up to six more of your people, they can participate at a reduced rate of 33% of the normal fee(that is only US\$233.00).
(Normal Fee is \$699.00)
- We follow up and support your teams via email, video-conference, and/or telephone at no cost without time limit.

**We will be glad to answer any questions you may have.
If your plant is qualified, we are sure you will want to
repeat this experience in the future!**
