Clarification on the Meaning of TPM

- Since the creation of the TPM tool in the Toyota Production System there has been some misunderstanding around it
- Some People think TPM is a “Maintenance” issue
- In reality it is a ***New Management Culture*** which once developed will benefit the Whole Operation
- It implies that every person in the organization will be an active part in the mission to preserve equipment and plant in excellent shape so the productivity is not affected
- For this reason ***TPM is a Management Issue***
- TPM helps create the right Cooperation environment

Benefits to Expect from TPM

- When TPM is in place the quality and flow of products is highly improved
- The equipment runs with top efficiency and lasts longer
- Operations are safer and more productive
- Defects are reduced or eliminated
- Timelines for delivery are complied with
- The plant is more reliable and the **cost of operation** is drastically reduced
- Chronic problems are eliminated
- Motivated People function better all the time

Delegates to this Event will...

- Learn the most important tools to have a successful TPM Implementation
- Develop the skills to bring on board people from all areas and get the support from everyone in the organization in order to succeed in this valuable strategy
- Become active advocates and enjoy the many advantages of World-Class productivity
